This personal protective equipment (PPE) adheres to EU Regulation 2016/425 and is covered by the current EU type n°: 2500222.C1 Version: 02 certificate number issued by TTS - Total Testing Services srl, European notified body 2959.

This personal protective equipment (PPE) has been validated through the MODULE D audit conducted by Quintin Certifications, a European notified body (No. 2927).

EU Declaration of Conformity: available for download on our website: [www.dl-equipement.fr](http://www.dl-equipement.fr) (Please enter the product code; the download link is located below the product description.)

**Instructions and precautions for use:**

These work pants, constructed from Kevlar fleece fabric and featuring one insulating interlayer along with a 100% Proban-treated cotton lining, are specifically designed for use in proximity to high heat zones. Each time you utilize the dlp10/8xx/xx trousers, it is essential to verify that they are free from tears or dirt, as any damage or contamination may compromise their protective efficacy. This garment must always be worn completely closed and in conjunction with the dlv10/8xx/xx jacket to guarantee uniform protection of the body. The trousers shall only be worn in combination with jackets that comply with ISO 11612 at an equivalent or higher performance level. Suspenders should not be worn directly against the skin.

**Protection limits:**

The protection is uniform across the entire surface of the garment. These trousers are not appropriate for work environments where there is a risk of molten material projection; in such instances, it is crucial to wear clothing made from aluminized fabric to ensure protection tailored to the hazards. The flame retardant treatment of the lining is assured when following the recommended washing instructions. In the event of an accidental spillage of chemicals or flammable liquids, the wearer must promptly remove the jacket and verify that the liquids have not contacted the skin. The trouser must then be either cleaned or decommissioned.

**Packaging and Storage:**

Trouser is delivered in a shipping carton without additional packaging (no specific packaging required). Storage is recommended in a clean, dry place, away from light, in order to maintain the level of protection corresponding to the tests carried out.

**Maintenance and cleaning:**

Cleaning through domestic washing in accordance with ISO 6330, comprising five washing cycles, with a maximum washing temperature of 40°. S.A.R.L. DL Equipment is the sole company authorized to repair dlp10/8xx/xx trousers, ensuring the use of materials certified in the compliance file.

**Manufacturing and expiration date:**

Date of manufacture: on label (YEAR\_MONTH\_XXXX.(XXXX=traceability identifier)

Expiry date: must not exceed 10 years.

**Provided that the guidelines for usage and storage are adhered to.**

**Nuisances and Allergies:**

To the best of our knowledge, there are no cases.

**Recycling and Disposal:**

The materials employed in the production of this item, to our knowledge, do not exhibit any specific harmfulness; the disposal or recycling of this garment can be conducted in accordance with established practices.
